People of all ages and circumstances benefit from the Therapeutic Harp

Introduction

For centuries, the beneficial relationship between music and healing has been well established. We now have substantial documentation of the responsiveness to and appreciation of music by peoples of all ages and cultures. Music played on the harp has several unique healing properties. The resonance from the strings, including the range of pitch and tonal color, set up an important relationship between the sound and the recipient. Historically, the harp has been a symbol of relief and comfort.

Harp for Health, Comfort, Relaxation and Restoration

Practitioners use the small harp as a bedside instrument with the intention of supporting the recipient's goal of healing. This goal may be emotional, physical, mental or spiritual in nature. The soothing sounds of the harp not only can enhance the quality of life, but create the possibility of interactive work in which the recipient might play the harp. Working with the therapeutic harp is as varied as our clients.

Children in hospital settings, and with other special needs such as developmental disabilities, respond well to the harp. Evidence of a range of healthy outcomes have been recorded. They include appropriate excitement, joy, empowerment, as well as relaxation.

In the Corporate Structure, harps have been utilized as part of a stress management program. The results area "timeout" refreshment and centering for employees. Increased concentration and motivation have been reported.

During childbirth, harp music helps to create an atmosphere of love and safety, with the possibility of supporting the rhythm of the mother's breathing.

Interactive work, touching and even learning to play the harp, increases the recipient's physical coordination and concentration. The benefit of a shared activity can also be important.

For People in Intensive Care Units, monitors show that the heart rate decreases and the oxygenation levels increase when soothing harp music is played. Harp music provides sound or focus other than the humming and beeping of hospital machines.

In Hospices, transitional stages are often an area where the harp music can be very supportive. The sounds of the harp comfort and soothe the patient who may be in pain or experiencing fear or anxiety. The families of these loved ones also benefit from the calming influence of the therapeutic harp as well as the reprieve from tension.

People who suffer from Alzheimer's Disease often access memory through songs from their past.
